BUTTON PRESS
## QUICK START GUIDE

Make your own custom buttons!
Our buttons are .75" and 1.75" in diameter

1)

Place these in the left die:

Mylar clear film

Picture
(image side up)

Shell
(flat side up)

slide it under the upper die and press!

2)

Place these in the right die:

Button back (FLAT-side of the pin on top)

slide it under the upper die and press!

Prior to pressing:

→ Prep the design on a digital software (google docs, illustrator, figma, ,etc...)

→ To size the designs, guess and check by copying and pasting the same design but in different dimensions

→ Print it out. Cut it out using the provided circle cutters (or use the vinyl cutter if you want!)

Switching out the dies

Remove the silver metal rods on the sides of the white bar.

Slide the white bar with the dies out.

Grab the upper die, push it up, turn to the left, and pull it down with a good bit of force (you aren't breaking it don't worry)

Do these steps in reverse to place the new die in.
